

Symfony 2 set background image using CSS

 stackoverflow.com/questions/23447339/symfony-2-set-background-image-using-css

You should store your images in the bundle folder.

```
src/MyBundle/Resources/public/images
```

and your css in

```
src/MyBundle/Resources/public/css
```

since only **web** folder is accesible from outside you should use the command

```
app/console assets:install web --symlink
```

this will now create the links for the **web** folder as

```
web/bundles/Project_name/css
web/bundles/Project_name/images
```

So your relative path for the image would be as

```
.header{
  background-image: url("../images/mainlogo.gif");
}
```

And in twig you should use `asset()` function to link your styles:

```
<link href="{{
asset('bundles/acmeweb/css/yourstylesheet.css') }}"
rel="stylesheet" type="text/css" />
```

you can find complete documentation [here](#)
